#### A NEW GEOMETRY

Speaking before the recent annual meeting of the American Association for the Advancement of Science (Kansas City), Dr. James Pierpont, of Yale University, tells of a new non-Euclidian system of space and spatial measurement that (assuming that Dr. Einstein's propositions are true) is built upon them. In this Einsteinian system, no line is absolutely straight; but the projected ends of any line will met ultimately, and thus form a circle whose circumference is estimated at 18 quintillion miles. A line can only be as straight as an arc of this circle.
